CSA-0917 Java programming

N. Surya

Tuesday

Level exam - 3

192511233

1)

AIM:

To write a program to print number of factors & to print nth factor of the given number.

Program:

```
import java.util.Scanner;  
public class Main {  
    public static void main(String[] args)  
    {  
        Scanner sc = new Scanner(System.in);  
        int n = sc.nextInt();  
        int num = sc.nextInt();  
        int i;  
        int count = 0;  
        for (i = 1; i <= n; i++) {  
            if (num % i == 0) {
```

```
count = count + 1 ;
```

```
if (count == num) {
```

```
    System.out.println("factor is : "+i);
```

```
    break ;
```

```
}
```

Input:

100

4

output:

factor is = 5

result:

the code has executed successfully

2) AIM :

write a Java code to display
user bank account details.
Program:

```
import java.util.Scanner;  
public class main {  
    public static void main (String[] args) {  
        Scanner sc = new Scanner (System.in);  
        int n = sc.nextInt();  
        String name = sc.next();  
        char type = sc.next().charAt(0);  
        int bal = sc.nextInt();  
        int c = sc.nextInt();  
        int a = sc.nextInt();  
        if (c == 1) {  
            bal = bal + a;  
        }  
        else {  
            bal = bal - a;  
        }  
    }  
}
```

```
system.out.println("The balance  
amount is = " + bal);
```

y
y

Input:

100

Surya

5

4000

2

200

output:

the balance amount is = 3800.

result:

The code has successfully
executed.
