Thursday

CSA-0917 Java programming

N. Surya

Level - 2 exam.

192511233

1)

AIM:

To remove duplicate item from an array

code:

```
import java.util.Scanner;
```

```
public class Main {
```

```
    public static void main (String [] args)
```

```
    {
```

```
        Scanner sc = new Scanner (System.in);
```

```
        int n = sc.nextInt();
```

```
        int arr [] = new int [n];
```

```
        int i, j;
```

```
        for (i = 0; i < n; i++) {
```

```
            arr[i] = sc.nextInt();
```

```
        }
```

```
        for (i = 0; i < arr.length; i++) {
```

```

for (j = 0; j < i; j++) {
    if (arr[i] == arr[j])
        break;
}

```

```

if (i == j)

```

```

    System.out.print(arr[i] + " ");
}

```

Input:

7 10 20 20 30 40 40 50

output

10 20 30 40 50

Result:

The outputs successfully  
verified.

2) AIM:

count all prime & composite numbers

Code:

```
public class main {  
    public static void main(String[] args) {
```

```
        int arr[] = {4, 5, 4, 2, 9, 7, 1, 7, 5, 9, 9, 8, 2, 3};
```

```
        int p = 0;
```

```
        int c = 0;
```

```
        for (int i = 0; i < arr.length; i++) {
```

```
            int count = 0;
```

```
            for (int j = 1; j <= arr[i]; j++) {
```

```
                if (arr[i] % j == 0)
```

```
                    count++;
```

```
            } if (count == 2)
```

```
                p++;
```

```
            else if (count > 2)
```

```
                c++;
```

```
System.out.println(c);
```

```
System.out.println(c);
```

```
}  
}
```

```
Output:
```

```
5
```

```
3
```

```
Result:
```

The outputs verified successfully.

10) AIM:

To write a program to read a char until "

code:

```
import java.util.Scanner;
```

```
public class main {
```

```
    public static void main (String[] args) {
```

```
        Scanner sc = new Scanner (System.in);
```

```
        int u=0, l=0, d=0;
```

```

char ch;
do {
    ch = sc.next().charAt(0);
    if (ch >= 'A' && ch <= 'Z')
        u++;
    else if (ch >= 'a' && ch <= 'z')
        l++;
    else if (ch >= '0' && ch <= '9')
        d++;
} while (ch != '*');
System.out.println(u);
System.out.println(l);
System.out.println(d);
}
}

```

Input:

w d A n g H \*

Output

4 2 0

Result: The outputs verified successful

3) AIM:

To write a program to print the available amount in ATM.

Code:

```
import java.util.Scanner;
public class main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int n1 = sc.nextInt();
        int n2 = sc.nextInt();
        int n3 = sc.nextInt();
        int n4 = sc.nextInt();
        int sum = 0;
        int d1 = 500 * n1;
        int d2 = 100 * n2;
        int d3 = 200 * n3;
        int d4 = 2000 * n4;
        sum = d1 + d2 + d3 + d4;
    }
}
```

system.out.println("Total available  
balance in ATM = " + sum);

y  
y

Input

4

20

32

Output:

total available balance in ATM = 12400

Result:

Hence the output verified successfully.
